

Abstract of the Disclosure

The present invention provides a pressure-sensitive adhesive sheet having superior release properties of a sheet
5 material and a pressure-sensitive adhesive layer, and a sheet material having a release function suitable for the sheet. The present invention provides a single layer or laminate sheet material having a release function for a pressure-sensitive adhesive sheet, wherein the sheet material itself when it is a
10 single layer, and at least one of the outermost layers when it is a laminate, is made from a resin material containing a linear ethylene resin as a main component, and the resin material shows an amount of an eluted component at not more than 30°C of 3 wt% -
30 wt% of the entire resin material, as measured by a
15 Temperature Rising Elution Fractionation, and a pressure-sensitive adhesive sheet that uses the sheet material.
